

## Correct way to add external jars (lib/\*.jar) to an IntelliJ IDEA project

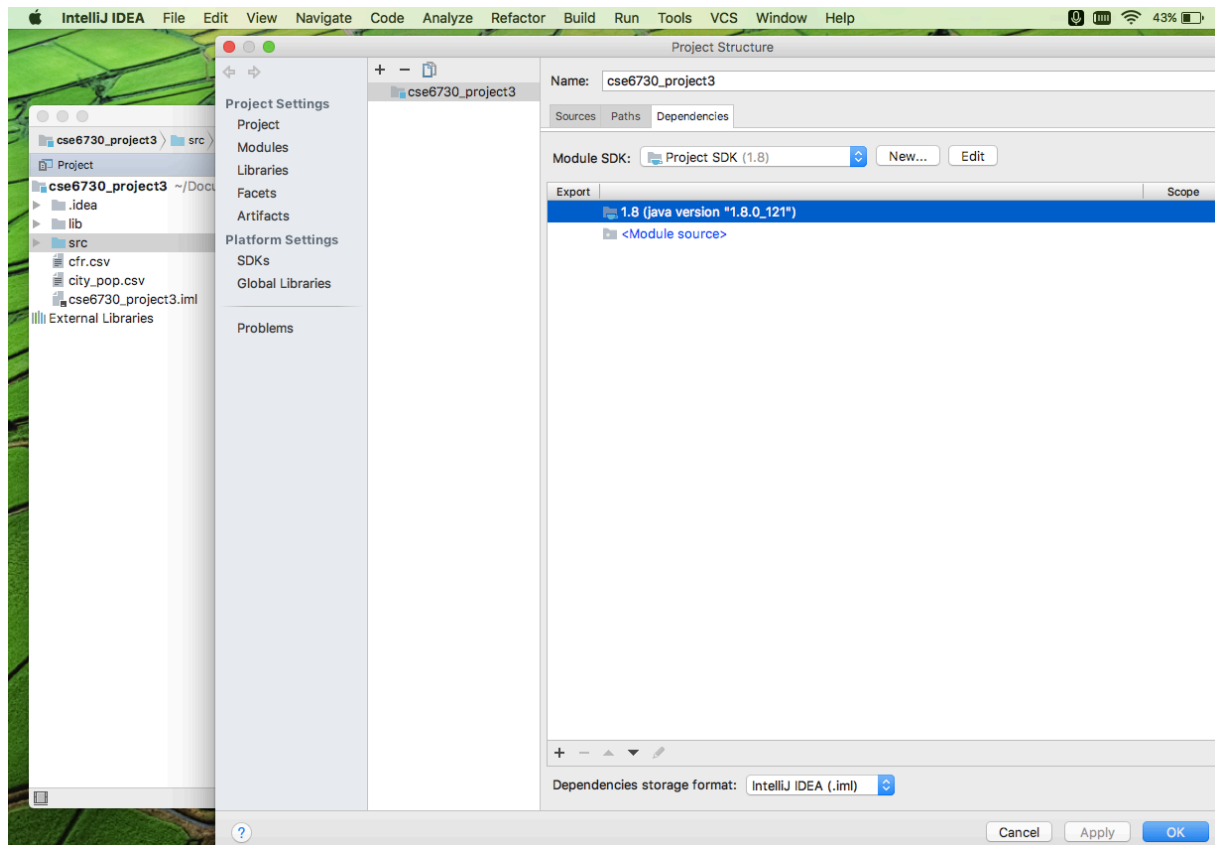

Reference: <http://stackoverflow.com/questions/1051640/correct-way-to-add-external-jars-lib-jar-to-an-intellij-idea-project>

Our project requires the user to add lib/json-simple-1.1.jar to our IntelliJ IDEA project in order to import packages to generate json files.

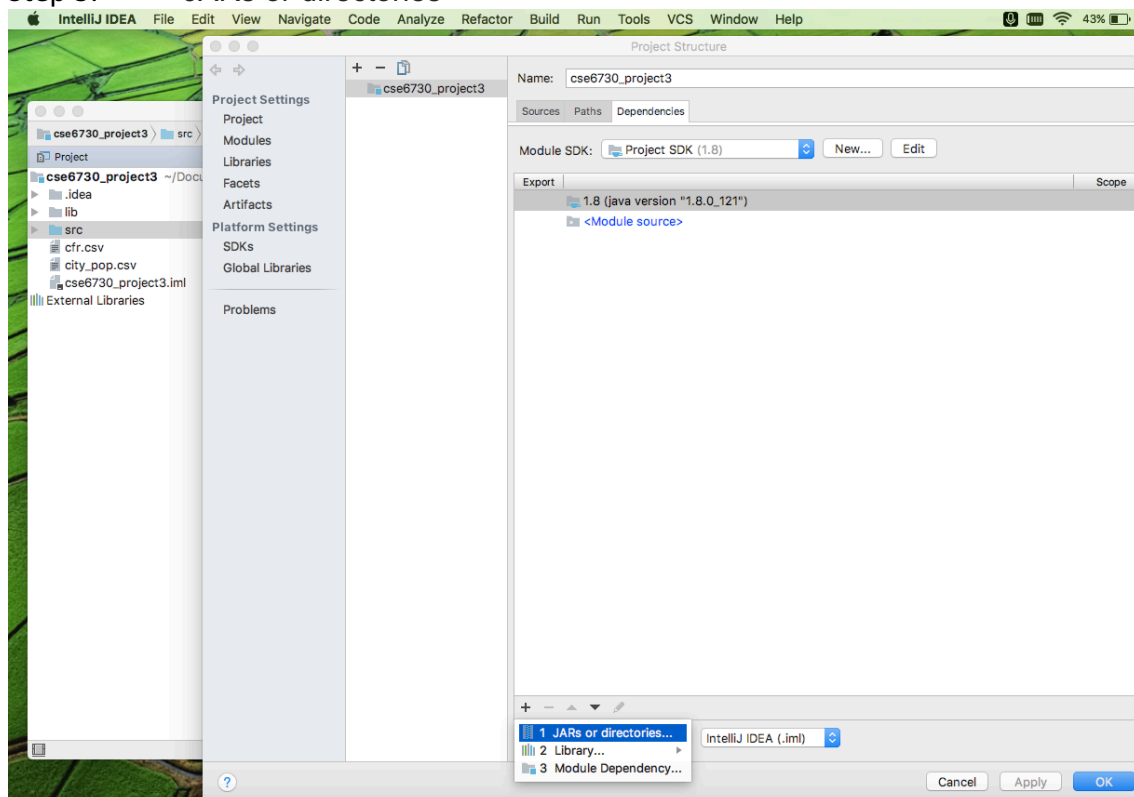

Step 1: Click File from File menu and select Project Structure (⌘ + ⌘ + ⌘ + S on Windows/Linux, ⌘ + ; on Mac OS X)

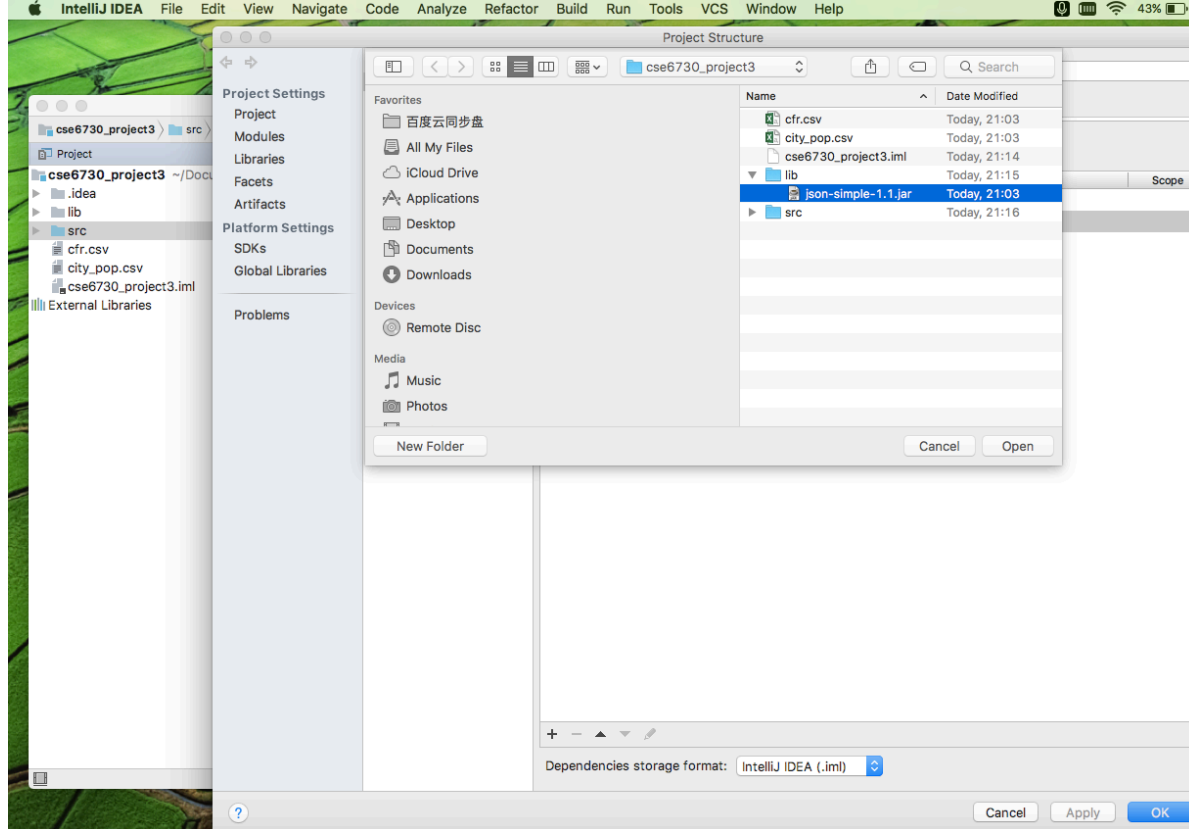

Step 2: Select Modules at the left panel and select Dependencies tab

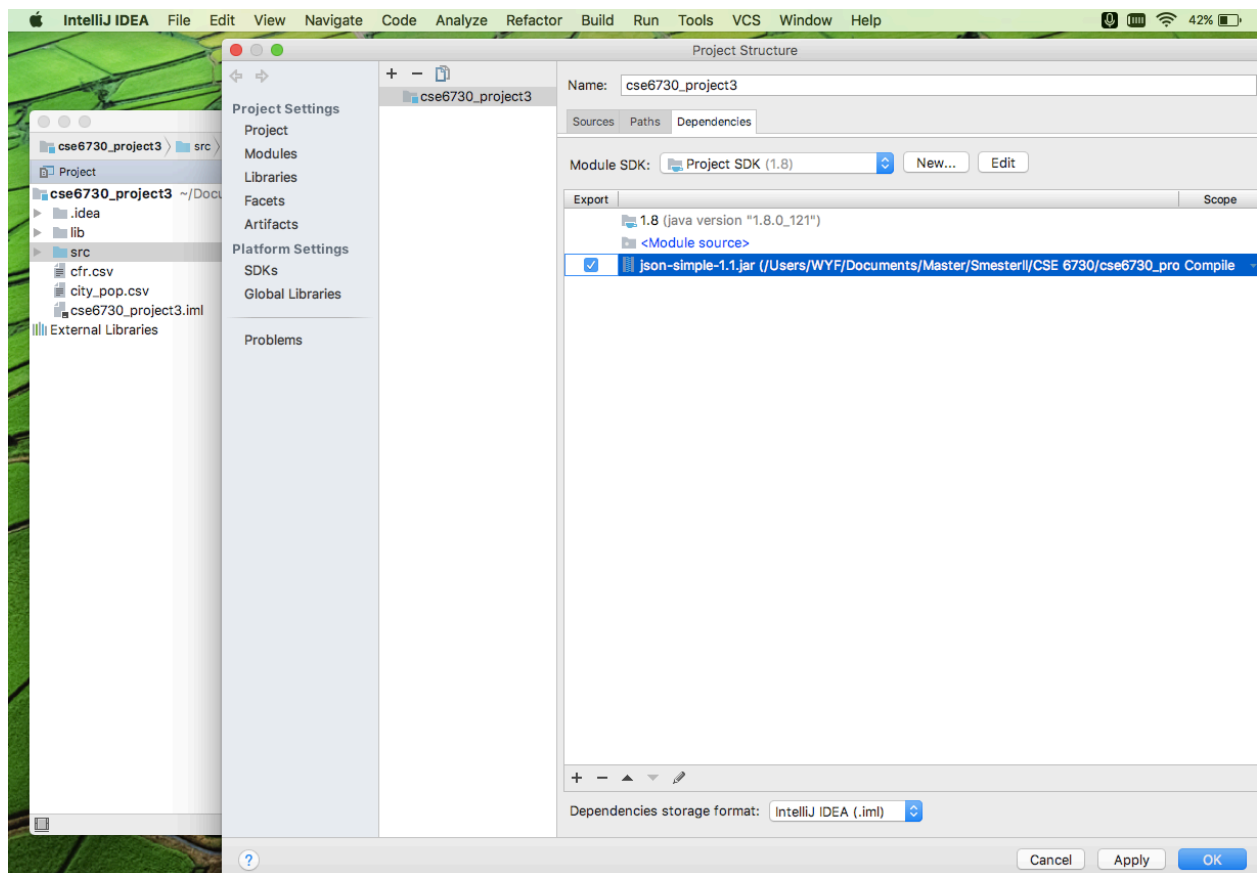

### Step 3: '+' → JARs or directories

#### Step 4: Open json-simple-1.1.jar in lib folder

#### Step 5: Select the jar you just added and click “OK”

Congratulations! Now you can run our project and see our simulation result!
